Memory Game

1 Website Overview

The Memory Game is a browser-based card matching game developed using HTML, CSS and JavaScript. Players flip two cards at a time to find matching image pairs. When all pairs are matched, the game displays the final score.

2 Features Implemented

- 4*4 card grid.
- Randomized card positions each game.
- Match detection.
- Score tracking.
- Hide cards after mismatch.
- Permanent display of all Matched cards.
- Game completion alert.
- Responsive layout using CSS grid.
